

Furniture & Cabinetry Care Guide

Tip 1 – The Finish

Our standard finish is a catalyzed conversion varnish. The finish is considered waterproof, but if there is a spill, you will want to clean it up right way to avoid any watermarks. Avoid placing hot items directly on the table or furniture piece, such as plates, cups, pans, etc. To keep the finish beautiful and blemish-free, we suggest using coasters or placemats to protect from condensation and extra hot temperatures.

Tip 2 – Avoid Scratching

To avoid scratching, do not drag or rub items across the table or furniture piece that could leave their mark, such as ceramic mugs and plates, toys, technological devices, etc.

Tip 3 – General Cleaning

When cleaning and caring for your cabinetry or furniture piece, we suggest using a dry duster or slightly damp cloth with mild soap to remove dust, dirt or stains. Gently wipe the surface area until desired result is achieved. Refrain from rubbing the same surface area for an extended period of time. Do not use any cleaning tools that would scratch the table, furniture piece, or cabinetry, including abrasive cleaning pads. You should never use wax, furniture polish, oils, or any other harsh chemicals and cleaners. These methods are not necessary and could potentially damage the finish.

Tip 4 – Be Aware of Sunlight

Direct sun exposure can fade and stain natural wood and painted finishes. If possible, avoid placing furniture pieces in front of an open window with direct sunlight and closely monitor your cabinetry or furniture piece to ensure sunlight is not affecting it in a negative way.

Tip 5 – Be Smart

Although we build our furniture and cabinetry products to be durable and sturdy, we do not recommend standing, sitting, or laying on them. This may cause damage to the furniture piece or cabinetry and encourage unsafe behavior.
